Shopping List App

Problem Statement
Users are tired of not remembering what they need and what they have at home when going to the store. Our app allows users to easily keep track of these things rather than having to scribble their needs on a random napkin.

Who is experiencing the problem?
People who need to make regular trips to the grocery store.

What is the problem?
Having to manage what items you need to buy from the store, and what you have already bought.

Where does the problem present itself?
At home or in the grocery store.

Why does it matter?
Not properly planning groceries can lead to overbuying or some potentially disappointing dinners.
